There’s a Light at the End of the Tunnel
And it May Even Be a Train!

Following months of rumors and speculation, the California Department of Transportation (Caltrans) announced on November 8 that the new railcars destined for the Midwest and California will be built by Siemens at its plant in Sacramento CA. The new contract calls for 137 single-level cars, with 49 going to Caltrans and 88 to the Illinois Department of Transportation under a multi-state agreement that will deploy the new cars on state-supported routes in Illinois, Michigan and Missouri.

Siemens’ Sacramento manufacturing hub has been in existence for more than 30 years, most recently producing the 33 SC-44 Charger locomotives that will be used on the Wolverine, Blue Water and Pere Marquette routes in Michigan, the Carl Sandburg, Saluki/Illini and Lincoln services in Illinois, the Hiawatha in Wisconsin and the Missouri River Runner in Missouri.

Siemens has also built the trainsets for Florida’s high speed Brightline trains. It is widely thought that the Midwest’s new cars will be similar in design to those built for the Brightline.

According to the Caltrans press release, the new cars will have spacious interiors focused on passenger comfort and will be equipped with Wi-Fi, convenient power outlets, large windows, bike racks, work tables, state-of-the-art restrooms with touchless controls and full ADA accessibility throughout. The sealed passageway between cars eliminates the hazardous vestibule, which is slippery during rain and snow. The cars are to be delivered in 24 to 34 months after production begins next year.

Trains Newswire on 9 November reported that the California funding appears secure, but a question remains about the funding for the Midwest equipment which flowed through the American Recovery and Reinvestment Act of 2009 with a spending deadline of 30 September 2017. Newswire had not reached the Midwest states for confirmation of their funding.

The original 2012 order for 130 bi-level rail cars was with Nippon-Sharyo, which built a new plant in Rochelle IL and expected to employ nearly 100 workers. Production was put in limbo when the prototype failed a crash test in September of 2015.
Amtrak adds trains for Thanksgiving, ridership rebounds after construction

MDOT, November 8, 2017 -- In anticipation of the busiest travel week of the year, Amtrak will accommodate the surge of holiday travelers with extra trains in Michigan. Tickets sell out quickly, so customers are encouraged to plan ahead and book tickets early.

Michigan Special Thanksgiving Timetable

- Avoid the rush, arrive early. The busiest travel days are the Tuesday, Wednesday and Sunday of Thanksgiving week. Customers are encouraged to arrive 45 minutes before departure, especially if picking up tickets.
- Trains feature free Wi-Fi, outlets at every seat, ample leg room and no middle seat.
- For only $25, cats and small dogs (20 pounds or less) are welcome for trips up to seven hours on most routes.
- Check holiday train schedules and status before arriving at the station on Track Your Train, or Amtrak mobile apps.

Ridership Rebounds

Overall ridership on Michigan's state-sponsored Amtrak trains increased in FY 2017 to 738,837, an 8% improvement over the previous year. This increase in ridership is attributed to reduced delays as well as a full schedule of trains operating on the Chicago-to-Detroit/Pontiac Wolverine corridor. During the summer of 2016, track and signal construction between Kalamazoo and Dearborn resulted in reduced schedules and delays. This year, trains are operating faster and smoother, and Wolverine ridership has increased 12% over the previous year, with sales of $20.4 million.

"We are excited to see construction activity wrap up on the corridor and customers are returning to the trains this year," said Tim Hoefnner, MDOT Office of Rail director. "Amtrak trains continue to provide a convenient and comfortable form of transportation for people to travel in and out of Michigan."

The Chicago-to-Holland/Grand Rapids Pere Marquette service saw a 4% ridership increase, with sales of $3.2 million. The Chicago-to-East Lansing/Port Huron Blue Water service saw a ridership increase of 2%, with sales of $6.5 million.

Michigan Association of Railroad Passengers
44th Annual Meeting
O'Kelly Banquet Hall, 23663 Park St, Dearborn MI 48124
2 December 2017  10:00 am – 2:00 pm
Map & Directions

Keynote Speaker
Rick Harnish
“A Bright Future for Passenger Trains in the Midwest”

Make plans now to attend! This will be a joint meeting with the Midwest High Speed Rail Association, whose executive director, Rick Harnish, will speak about exciting developments to create a strengthened and expanded passenger train network throughout the Midwest over the next four decades.

MARP will honor John DeLora for his dedicated work over many years to improve Michigan train services and conditions for passengers. John founded MARP in 1973 and served as Chair for many years. He is also a 48 year member of the National Association of Railroad Passengers and served 15 years as Vice-President before his retirement in January this year.

The cost to attend is $25 per person and includes a catered luncheon. The registration deadline is November 24.

Hate Going West to Go East?

A new Amtrak Thruway service now allows, for example, a Port Huron traveler the opportunity to board a bus at 5:25 pm and arrive in Cleveland on the *Capitol Ltd.* a little more than eight hours later. Or maybe that traveler would LIKE to go east—to Jackson MI, perhaps. An 11:25 am Thruway bus connects, with a 5 hour wait, to the *Wolverine* at Detroit for a 7:59 pm arrival in Jackson. The return trip takes less time, leaving Jackson at lunchtime to connect in Detroit with a Thruway bus arriving in Port Huron at 5:00 pm. Visit amtrak.com to explore the many new options.

Michigan Flyer’s “Detroit Connector” Now Welcomes the General Public

The Detroit Connector, a University of Michigan bus service connecting the Ann Arbor campus to the city of Detroit, now provides service seven days a week to U-M faculty, staff, students and—for the first time—the general public. Stops include Central Campus Transit Center (CCTC) in Ann Arbor, UM-Dearborn, and UM Detroit Center. Extended hours Friday & Saturday. Schedule available online at detroitconnector.umich.edu/schedule

Ann Arbor Station Gets a Fresh Look

By Steve Sobel

I took a chance and drove out on November 7th, not knowing when Amtrak management would be on site. No sooner had I arrived than I met Mr. James Ratliff, District Station Manager-East. He was in town to make certain all work was done on time and to his satisfaction. Except for the floor being cleaned and mopped, all of the improvements had been completed.

Mr. Ratliff couldn't tell me when other needed improvements will be forthcoming. “It all depends when we can get some additional monies,” he said. At least two more items would be welcome: automatic entrance doors and replacement of a lot of the waiting room seats as many of them are not in good condition. It also would help if the Formica that's in so-so condition at the ticket windows could be replaced. I was told that the wiring inside the ticket booth would be upgraded.

Although deliberations about a “new” station continue, it will be at least five years before this takes place. For now, Amtrak has decided to invest in some needed improvements.

I am impressed with the station’s new look! The new ceiling tiles and lighting fixtures give the room a much more cheery atmosphere. If you haven’t been to the station in a while, may I suggest a visit soon? You will not be disappointed.

Editor’s note: The Ann Arbor Amtrak Station also serves Greyhound. The Ride’s Bus #21 connects to local transit with 30-minutes headways 7am-11pm on weekdays and hourly service 9am-7pm on weekends. MARP members Jeanie and Chuck Merckel and Clark Charnetski keep the station supplied with MARP newspapers and other passenger information.
View from elsewhere . . .

“This fight has gone on long enough. For decades, rail passengers have been left waiting for freight trains to clear the rails. Even acts of Congress haven’t been able to budge them out of the way. We need the courts to now recognize and allow Congress’ goal to be carried out. The law creating Amtrak in the early 1970s codified a deal these railroads made with the American taxpayer: we’ll relieve you of your common-carrier responsibility for passenger service, and in exchange you’ll ensure those passenger trains get where they need to go on time. It has been a battle ever since.”

—Jim Mathews, NARP CEO, commenting on recent filing in the case “National Association of Railroad Passengers et al versus Union Pacific Railroad et al” related to standards for on-time performance. Read the petition here.

“Our experience in developing the Michigan Flyer airport shuttle service should prove valuable for the Detroit Connector. One key to building ridership is frequency of service.”

—Chad Cushman, president of Indian Trails, commenting on increased frequency and expanded hours for the Michigan Flyer/Detroit Connector which connects UM campuses in Ann Arbor, Dearborn and Detroit.

Train Tracks That Float

Not the least of the engineering challenges in building the new East Link light rail line connecting downtown Seattle and Bellevue is crossing the I-90 floating bridge. Described as a “brilliant solution” to keep the tracks in line, a series of steel platforms and flexible bearings will mitigate effects of roll, pitch and yaw where lake levels change up to two feet in a year and wind and traffic create slight twisting. Read more about the project here. People familiar with the Seattle area will enjoy part 1 and part 2 of a virtual ride on the new line when it opens in 2023.
